

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (previously presented): An electronic presentation system comprising:

Ethernet communication means;

a first image and voice display means connected to said Ethernet communication means in which display control and communication control through said Ethernet communication means are controlled by remote control means; and

a personal computer provided with a second image and voice display means connected to said Ethernet communication means and different from said first image and voice display means placed in a position different from the position placing said first image and voice display means, and input means;

wherein said remote control means captures display contents displayed by said personal computer on said second image and voice display means to display said captured display contents on said first image and voice display means at the same time, and

wherein said Ethernet communication means is used to transfer said display contents, said display control and said communication control.

2. (previously presented): The electronic presentation system according to claim 1, wherein said remote control means comprises a remote control transmitter sending a sending signal of a code corresponding to a depressed button and means for converting said sending signal of said remote control transmitter to a communication signal of said Ethernet communication means and sending the communication signal;

wherein said personal computer comprises means for converting said sending signal of said remote control transmitter sent through said Ethernet communication means to a signal equivalent to an output signal of the input means provided in said personal computer, means for selecting previously created display contents to be displayed as said display contents on said second image and voice display means, by said converted signal equivalent to the output signal of said input means, and means for converting a display signal of said selected display contents displayed on said second image and voice display means to a communication signal of said Ethernet communication means at the same time and sending the communication signal using said Ethernet communication means;

wherein said remote control means further comprises means for sending the display signal of said second image and voice display means sent through said Ethernet communication means to said first image and voice display means.

3. (original): The electronic presentation system according to claim 2, wherein the selection of the previously created display contents displayed on said second image and voice display means, done by the signal equivalent to said converted output signal of said input means

is executed by basic software installed in said personal computer and application software operated under said basic software and used to previously create said display contents.

4. (previously presented): The electronic presentation system according to claim 2, wherein said Ethernet communication means is a wired communication system.

5. (previously presented): The electronic presentation system according to claim 2, wherein said Ethernet communication means is a wireless communication system.

6. (previously presented): The electronic presentation system according to claim 1, wherein said personal computer provided with a second image and voice display means is remotely connected.

7. (previously presented): An electronic presentation system comprising:

an Ethernet communications network;

a remote control device;

a first image and voice display device connected to said communications network in which display control and communications control transmitted via said Ethernet communications network are controlled by said remote control device; and

a personal computer provided with a second image and voice display device,
wherein said personal computer is connected to said Ethernet communications network,
and
wherein said remote control device captures display contents on said personal computer
to be displayed on said first image and voice display device and said second image and voice
display device, and
wherein said Ethernet communications network is used to transfer said display contents,
said display control and said communications control.

8. (previously presented): The electronic presentation system according to claim 7,
wherein said personal computer provided with a second image and voice display device is
remotely connected.

9. (previously presented): The electronic presentation system according to claim 7,
wherein said remote control device comprises a remote control transmitter, remote control signal
reception unit connected to said Ethernet communications network and said personal computer
with presentation software connected to said Ethernet communications network;

wherein said remote control transmitter sends a signal of a code corresponding to a
depressed button on said remote control transmitter to said remote control signal reception unit
which then transmits said code via said Ethernet communications network;

wherein said personal computer with presentation software converts said code of said remote control signal reception unit sent through said Ethernet communications network to a signal equivalent to an output signal of an input device or devices provided in said personal computer, selects previously created display contents to be displayed as said display contents on said second image and voice display device by said converted signal equivalent to the output signal of said input device or devices, converts said selected display contents displayed on said second image and voice display device to a communication signal of said Ethernet communications network and sends said communication signal via said Ethernet communications network to said first image and voice display device.

10. (previously presented): The electronic presentation system according to claim 9, wherein the selection of the previously created display contents displayed on said second image and voice display device done by the signal equivalent to said converted output signal of said input device or devices is executed by basic software installed in said personal computer and application software operated under said basic software and used to previously create said display contents.

11. (previously presented): The electronic presentation system according to claim 9, wherein said Ethernet communications network is a wired communication system.

12. (previously presented): The electronic presentation system according to claim 9, wherein said Ethernet communications network is a wireless communication system.

13.- 26. (canceled).
